# *The Nottingham Acute Kidney Injury Course*

Acute kidney injury (AKI) is common, harmful and costly. However it is often preventable and reversible through a greater awareness of risk factors and from early detection, recognition and prompt management. With a greater knowledge and understanding of AKI, significant improvements in patient care and outcomes can be achieved.

This course aims to give the clinician a comprehensive and up to date overview of the prevention, early detection and management of AKI. Including an overview of current staging systems, optimal fluid management, medical management of complications of AKI and AKI in special circumstances. The course combines didactic teaching sessions with case based discussions all of which are delivered by consultants with experience in acute medicine, nephrology, radiology and urology.

The course is aimed at doctors of all grades who wish to undertake a comprehensive overview on the subject, particularly those undertaking training in nephrology, acute medicine, health care of the elderly, critical care and also emergency medicine.
